# Lecture 13: PEST MANAGEMENT - DEFINITION - NEED - OBJECTIVES -REQUIREMENTS FOR SUCCESSFUL PEST MANAGEMENT PROGRAMME - COMPONENTS OF PEST MANAGEMENT

## Pest Management (or) Integrated Pest Management – Definition IPM definition by FAO (1967)

Integrated Pest Management (IPM) is a system that, in the context of associated environment and population dynamics of the pest species, utilizes all suitable techniques and methods in as compatible a manner as possible and maintains pest populations at levels below those causing economic injury.

#### IPM definition by Luckmann and Metcalf (1994)

IPM is defined as the intelligent selection and use of pest control tactics that will ensure favourable economical, ecological and sociological consequences.

### Need for Pest Management (or) Why Pest Management

- 1. Development of resistance in insects against insecticides e.g. OP and synthetic pyrethroid resistance in *Helicoverpa armigera*.
- 2. Out break of secondary pests e.g. Whiteflies emerged as major pest when spraying insecticide against *H. armigera*.
- 3. Resurgence of target pests e.g. BPH of rice increased when some OP chemicals are applied.
- 4. When number of application increases, profit decreases.
- 5. Environmental contamination and reduction in its quality.
- 6. Killing of non-target animals and natural enemies.
- 7. Human and animal health hazards.

#### Stages in crop protection leading to IPM

1.	Subsistence phase	:	Only natural control, no insecticide use
2.	Exploitation phase	:	Applying more pesticides, growing HY varieties and get more yield and returns
3.	Crisis phase	:	Due over use pesticides, problem of resurgence, resistance, secondary pest out break, increase in production cost
4.	Disaster phase	:	Due to increased pesticide use - No profit, high residue in soil - Collapse of control system
5.	Integrated Management Phase	:	IPM integrates ecofriendly methods to optimize control rather than maximise it.

#### **Objectives of pest management**

- 1. To reduce pest status below economic injury level. Complete elimination of pest is not the objective.
- 2. To manage insects by not only killing them but by preventing feeding, multiplication and dispersal.
- 3. To use ecofriendly methods, which will maintain quality of environment (air, water, wild life and plant life)
- 4. To make maximum use of natural mortality factors, apply control measures only when needed.
- 5. To use component in sustainable crop production.

#### Requirements for successful pest management programme

- 1. Correct identification of insect pests
- 2. Life history and behaviour of the pest
- 3. Natural enemies and weather factors affecting pest population
- 4. Pest surveillance will provide above data
- 5. Pest forecasting and predicting pest outbreak
- 6. Finding out ETL for each pest in a crop
- 7. Need and timing of control measure Decision
- 8. Selection of suitable methods of control
- 9. Analysis of cost/benefit and benefit/risk of each control measure
- 10. Farmer's awareness and participation
- 11. Government support

3. Tillage of soil

12. Consumer awareness on use of pesticides free products

# TOOLS OR COMPONENTS OF INTEGRATED PEST MANAGEMENT (Arranged in increasing order of complexity)

- i. Cultural method or use of agronomic practices
  - 1. Crop rotation 5. Pruning or thinning
  - 2. Crop refuse destruction 6. Fertilizer management
    - 7. Water management
  - 4. Variation in time of planting or harvesting
- 8. Intercropping
  9. Trap crop
- ii. Host plant resistance Antixenosis, antibiosis, tolerance
- iii. Mechanical methods of pest control
  - 1. Hand destruction
  - 2. Exclusion by screens, barriers
  - 3. Trapping, suction devices, collecting machine
  - 4. Crushing and grinding

### iv. Physical methods

- 1. Heat
- 2. Cold
- 3. Energy light trap, irradiation, light regulation
- 4. Sound
- v. Biological methods
  - 1. Protection and encouragement of NE
  - 2. Introduction, artificial increase and colonizing specific parasitoids and predators
  - 3. Pathogens on insects like virus, bacteria, fungi and protozoa
  - 4. Use of botanicals like neem, pongam, etc.
- vi. Chemical methods
  - 1. Attractants
  - 2. Repellents
  - 3. Insecticides OC, OP, carbamates, pyrethroids, etc.
  - 4. Insect growth inhibitors
  - 5. Chemosterilants

vii.Behavioural methods

- 1. Pheromones
- 2. Allelochemics
- viii. Genetic/biotechnology method
- Release of genetically incompatible/sterile pests
- Transgenic plant
- ix. Regulatory/legal method
- Plant/animal quarantine
- Eradication and suppression programme
